fluid continues to innovate with upgrades to the Viola series

On Jan 1, 2011 all fluid faucets became compliant with the new California low lead law (AB1953), which makes drinking water from your bathroom faucet safer. This conversion process demonstrated that low lead brass has very different properties than standard brass, which made it necessary to create new molds for all fluid faucets. While this process did result extended delivery times, it also created the opportunity for us to significantly upgrade fluid's features and designs. The Viola has benefited with several new features, which include:

- New handle design that continues the Viola curves
- New recessed swivel aerator that improves the appearance of the faucet and allows you to adjust the direction of the water flow to minimize any splashing in the sink.
- Extended spout length for enhanced looks and easier use
- Water Sense and Cal Green approved which means good for the environment
